Safety

We have established a dynamic top-ranking management team for safety production with the safety production accountability to the chairman, the standardization of safety production and underground space safety technical equipment, the investment in safety technology and equipment, the behavioral standardization of staff operations, the prevention and control of accidents and the emergency rescue capability of safety management.

Management & Control System

We have established a safety production management team with the chairman as the first person responsible for safety production. The Party and administration heads of the enterprise are the principal persons responsible for safety production in the workplace, and the chief engineer is responsible for the technical work of safety production. We have established a safety production committee with the general manager as the chairman and the deputy general managers as the vice chairmen, and the heads of the safety supervision department, the production technology department, the equipment department, the coal preparation department, the geological department, the mine rescue station and the safety supervision branches of the subordinate coal mines as members. The committee is responsible for the implementation of the safety production laws, regulations, rules and standards, the organization and coordination of the safety production work of the enterprise, the study and solution of major problems in safety production, and the organization of safety inspections.

We have established a safety production responsibility system with clear responsibilities for the chairman, the general manager, the deputy general managers, the chief engineer, the assistant general managers, the heads of the functional departments, the heads of the subordinate coal mines and the heads of the workshops and teams, and have established a safety production responsibility assessment system to assess the implementation of the safety production responsibility system on a regular basis.

Safety Standardization

According to the requirements of the safety production standardization system, each subordinate coal mine has established a safety production standardization management team with the head of the coal mine as the first person responsible for safety production, and has established a safety production standardization management system and safety production rules and regulations, and has established a safety production standardization assessment system to assess the implementation of the safety production standardization system on a regular basis.

According to the requirements of the safety production standardization system, each subordinate coal mine has established a safety production standardization management team with the head of the coal mine as the first person responsible for safety production, and has established a safety production standardization management system and safety production rules and regulations, and has established a safety production standardization assessment system to assess the implementation of the safety production standardization system on a regular basis.

Safety Training and Education

We strictly implement the safety production training system, and have established a safety training and education management team with the chairman as the first person responsible for safety training and education. We have established a safety training and education management system, and have established a safety training and education assessment system to assess the implementation of the safety training and education management system on a regular basis.

We strictly implement the safety production training system, and have established a safety training and education management team with the chairman as the first person responsible for safety training and education. We have established a safety training and education management system, and have established a safety training and education assessment system to assess the implementation of the safety training and education management system on a regular basis.

Safety Investment

We have established a safety production investment management system, and have established a safety investment assessment system to assess the implementation of the safety investment management system on a regular basis.

We have established a safety production investment management system, and have established a safety investment assessment system to assess the implementation of the safety investment management system on a regular basis.

Safety Standard

According to the requirements of the safety production laws, regulations, rules and standards, each subordinate coal mine has established a safety production management system, and has established a safety production management system for the underground space, and has established a safety production management system for the coal preparation department.

According to the requirements of the safety production laws, regulations, rules and standards, each subordinate coal mine has established a safety production management system, and has established a safety production management system for the underground space, and has established a safety production management system for the coal preparation department.

Safety Inspection

We strictly implement the safety production inspection system, and have established a safety inspection management team with the chairman as the first person responsible for safety inspection. We have established a safety inspection management system, and have established a safety inspection assessment system to assess the implementation of the safety inspection management system on a regular basis.

We strictly implement the safety production inspection system, and have established a safety inspection management team with the chairman as the first person responsible for safety inspection. We have established a safety inspection management system, and have established a safety inspection assessment system to assess the implementation of the safety inspection

Research Strength

In addition to the aforementioned additional efforts in technological innovation, energy conservation and environmental protection, the Company has also dedicated to the technological innovation, research and development of new materials, and the protection of intellectual property rights. We attach great importance to the management of R&D projects, and have established a sound R&D management system and a project management system covering the entire process from project initiation to project closing, thereby effectively improving the efficiency of R&D projects.

Establishing Platforms

We have established a integrated scientific research institution platform, a production-oriented technology research platform, a cooperative research platform with universities and institutions, and a post-doctoral research workstation platform. We have established a integrated scientific research platform with the integrated fiber material as the core, and a production-oriented technology research platform with the graphite material as the core.

Attracting Talent

We provide competitive salaries and benefits, and a platform for employees to realize their self-worth. We pay attention to the cultivation of academic leaders, technical backbones and high-caliber talents, and provide employees with opportunities to participate in academic exchanges and training. We attach importance to the protection of intellectual property rights, and have established a sound incentive mechanism for employees' inventions and creations.

Equipment

We pay close attention to the development of technology and equipment. We specifically invest in the R&D of cutting-edge technologies, core materials and key technologies, and upgrade products.

Value Discovery

Responsible Concept

We pay close attention to the expectations of stakeholders, change in government policies, geopolitics, political risks, the media and the public. We implement the philosophy of "taking root locally and growing globally" to enhance the competitiveness of our products, the ecosystem, employee benefits and the sustainable development of society. We strive to become a high-caliber enterprise with a long history and a deep-rooted culture.

Responsible Management, Market Performance, Energy Conservation and Environmental Protection, Employee Care, and Corporate Citizenship. We actively invest in technological innovation to become a high-caliber enterprise.

Value Creation

We adhere to the principle of "Customer First" and provide customers with high-quality products and services. We continuously improve the quality of our products and services to meet customer needs and expectations. We also provide customers with timely and effective after-sales service to ensure customer satisfaction.

We create value for our employees by providing a safe and healthy working environment, competitive salaries and benefits, and opportunities for training and development. We also encourage employees to participate in community activities and volunteer work.

We create value for our shareholders by delivering consistent and sustainable returns on their investment. We also maintain a transparent and open communication with our shareholders.

We create value for our suppliers by establishing long-term partnerships and providing them with opportunities to grow and develop their businesses.

We create value for the environment by reducing our carbon footprint, conserving natural resources, and minimizing waste.

We create value for the community by supporting local initiatives and contributing to the development of the communities in which we operate.

Stakeholder Engagement

We engage with our stakeholders through various channels, including surveys, meetings, and online platforms. We listen to their feedback and concerns and take them into consideration when making decisions.

We engage with our customers to understand their needs and expectations. We also engage with our employees to understand their concerns and to provide them with opportunities for training and development.

We engage with our shareholders to provide them with information about our performance and to answer their questions.

We engage with our suppliers to establish long-term partnerships and to provide them with opportunities to grow and develop their businesses.

We engage with the environment to reduce our carbon footprint, conserve natural resources, and minimize waste.

We engage with the community to support local initiatives and to contribute to the development of the communities in which we operate.

Sustainability Report

We publish a sustainability report annually to disclose our performance in environmental, social, and governance (ESG) areas. The report is prepared in accordance with the Global Reporting Initiative (GRI) Standards.

The report includes information about our strategy, governance, risk management, and performance in ESG areas. It also includes information about our stakeholder engagement and our materiality assessment.

We use the report to communicate with our stakeholders and to demonstrate our commitment to sustainability.

Site Building

We have included corporate responsibility management, the status of the Group, adopted the objective, ear ead principles first, active improvement, performance evaluation and continuous improvement in 2018.

Employees participated in training related to corporate responsibility in 2016

Organizations

We take the leading organizational framework responsibility through the "CNBM Leading Group for Promoting Social Responsibility" headed by the Chairman. The higher leading organization to promote corporate responsibility, the Leading Group Office is charged for guiding and promoting corporate responsibility initiatives.

We take the function corporate responsibility management of the Headquarters through which to direct and promote corporate responsibility management and practices performance through the responsibilities of the Headquarters' relevant departments according to the Group, ational Group, ative Group.

With the board's participation and the leadership of the Headquarters, dedicated to the function departments of the Headquarters, ational Group, ative Group, ational Group, ative Group, ational Group, ative Group

Merger of CNBM and SINOMA

The China National Building Material Group Corporation (CNBM) and China National Materials Group Corporation (SINOMA) have been approved by the State Council, the ebb of the reform wave led by the former National Building Material Bureau. The handover through the ministry (1987), the restructuring of administrative system (1991), direct supervision by the Central Work Committee of Enterprise (1999) and direct management by the State-owned Assets Supervision and Administration Commission (SASAC) (2003). The successful restructuring of public Hong Kong companies, became pioneers of the boards of directors, changed their asset-limited corporation in the area (2009), and successfully merged into CNBM in August 2016.

In their respective development processes, both Groups achieved brilliant. For more than a decade, a China's agency corporation has been transformed into a market-oriented enterprise group, a leading building material enterprise group and a fortune global 500 enterprise.

SINOMA is the initiative, pioneering and leading China's reform of state-owned enterprises in the field of new materials that promote the application of scientific and technological achievements and accelerate the industrialization. Since 2000, by virtue of its competence in independent IPR, advanced technical equipment and significant capacity, it has achieved a growth rate of 45% higher than the industry average and has become a market-oriented enterprise in the field of new materials. Listed companies account for more than 80% of the total assets of the enterprise.

> The merger of CNBM and SINOMA
>
> Chairman

History of the China National Building Material Group Corporation

- **1984** — Approved by the State Council, the "China New Building Material (Group) Corporation" was established.
- **1988** — Directly under the state administration.
- **1997** — It was renamed as the China National Building Material Group Corporation.
- **2005** — It became a wholly state-owned enterprise directly under the State-owned Assets Supervision and Administration Commission of the State Council (SASAC), and was approved as a pilot enterprise for the establishment of a modern enterprise system.
- **2006** — It was rated as a "Backbone Enterprise of the National Equipment Manufacturing Industry".
- **2009** — It was approved as a pilot enterprise for the reform of state-owned capital investment companies.
- **2011** — It was approved as a pilot enterprise for the reform of the Holding Stock Exchange.
- **2012** — It changed its name to "China National Building Material Group Corporation".
- **2013** — It was approved as a pilot enterprise for the reform of "one enterprise with two boards of directors".
- **2014** — It was approved as a pilot enterprise for the reform of "one enterprise with two boards of directors" and the establishment of a modern enterprise system.

History of China National Materials Group Corporation

- **1984** — Approved by the State Economic Commission, the "China New Non-Metallic Mineral Industry Development Corporation" was established.
- **1988** — It was renamed as the "China Non-Metallic Mining and Metallurgical Design and Research Institute".
- **1997** — It was renamed as the China National Building Material Group Corporation.
- **2005** — It became a wholly state-owned enterprise directly under the State-owned Assets Supervision and Administration Commission of the State Council (SASAC), and was approved as a pilot enterprise for the establishment of a modern enterprise system.
- **2006** — It was rated as a "Backbone Enterprise of the National Equipment Manufacturing Industry".
- **2009** — It was approved as a pilot enterprise for the reform of state-owned capital investment companies.
- **2011** — It was approved as a pilot enterprise for the reform of the Holding Stock Exchange.
- **2012** — It changed its name to "China National Materials Group Corporation".
- **2013** — It was approved as a pilot enterprise for the reform of "one enterprise with two boards of directors".
- **2014** — It was approved as a pilot enterprise for the reform of "one enterprise with two boards of directors" and the establishment of a modern enterprise system.

- **2016** — Approved by SASAC of the State Council, the China National Building Material Group Corporation agreed with the China National Materials Group Corporation to establish CNBM.

Our Active Sustainable Development Goals (SDGs) of the United Nations

On September 25th, 2015, the United Nations formally approved 17 sustainable development goals, comprehensively promoting economic, social and environmental development through 2015 to 2030 by taking the path of sustainable development. As a member of the China Federation of the UN Global Compact, CNBM operates with the UN SDGs, actively implements the sustainable development path in the building material industry. In 2016, we prepared the 17 of the goals with the central government's performance.

1 No Poverty

Targeted poverty alleviation and assistance

- RMB **14.7** million was spent to help and reward special groups of employees
- **11,608** person-times of special groups of employees received help and rewards
- The donation amount hit RMB **24.0** million
- We targeted **5** districts and counties for poverty alleviation
- RMB **11.5** million was invested in poverty alleviation
- The input of voluntary activities reached about RMB **3.4** million
- **28,000** hours of voluntary services were provided by our employees

Tackling climate change, achieving effective carbon dioxide emissions reduction, adopting sustainable energy technologies

2 Zero Hunger

3 Good Health & Well-being

Green health initiatives adopted to well-being for all ages

- **342,000** person-times of employees received training in occupational health and safety
- About RMB **800** million was invested in occupational health and safety
- The completion rate of physical examinations of employees reached **96.0%**
- **0** production safety accidents occurred
- The recordable injury rate per 1,000 employees was decreased by **44.4%** on a year-on-year basis
- **0** new cases of occupational diseases
- We organized **228,000** person-times of employees to participate in various cultural and sports events

Three inclusive and sustainable education and professional training initiatives for all

- Our employees attended training for **3.3** million hours
- We supported our employees in gaining **3,028** academic degrees
- We provided **8** special scholarships
- We provided scholarships amounting to about RMB **370,000** in total
- We created **134** probation bases
- We offered **34,030** learning posts to students

4 Quality Education

5 Gender Equality

Achieve gender equality and empower all women and girls

- The ratio of the average salary of male employees to that of female employees was **3.3:1**
- The number of female employees reached **46,000**
- In management, females take up a proportion of **18.3%**

6 Clean Water and Sanitation

Ensure availability and sustainable management of water and sanitation for all

- Consumption of fresh water per RMB 10,000 of output value was reduced by **13.9%**
- Consumption of fresh water per ton of cement clinker was reduced by **17.4%**

7 Affordable and Clean Energy

Ensure access to affordable, reliable, sustainable and modern energy for all

- The installed capacity of cogeneration reached about **2,025.3** MW
- The annual generating capacity of cement cogeneration reached about **8.7** billion kWh

8 Decent Work and Economic Growth

Promote inclusive and sustainable economic growth, employment and decent work for all

- The total number of employees reached **234,511**
- The number of new employees hit **22,000**
- The coverage rate of labor contracts hit **100%**
- The coverage rate of social insurance hit **98%**
- The proportion of employees joining the Trade Union reached **91%**
- **22,871** employees were covered by corporate pensions
- **602** member companies carried out employee satisfaction surveys

9 Industry, Innovation and Infrastructure

Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

- **12** energy-saving and environmental protection service institutions
- **1** national carbon market capacity development building materials industry training base
- **9** cement production lines with the collaborative treatment of solid waste

10 Reduced Inequalities

Reduce inequality within and among countries

- The employment rate of ethnic minorities reached **2.5%**
- The proportion of employees with disabilities reached **8.0%**

11 Sustainable Cities and Communities

Make cities and human settlements inclusive, safe, resilient and sustainable

- We have built **54** new building materials bases
- Our energy-saving and environmental protection new housing businesses cover **39** countries

12 Responsible Consumption and Production

Ensure sustainable consumption and production patterns

- The treatment rate of solid waste reached **88.6%**
- The rate of responsibility-based procurement hit **94.8%**
- Expenditure on R&D activities amounted to about RMB **6.6** billion
- RMB **33.9** billion was recorded from the sales of new products
- The income from technological innovation reached RMB **1.6** billion

13 Climate Action

14 Life Below Water

Conserve and sustainably use the oceans, seas and marine resources for sustainable development

- The recycling rate of water hit **93.7%**

15 Life on Land

Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

- We had **9** state-level green mines
- The average greening rate of plants was **16.1%**
- About **150** million tons of solid waste was treated

16 Peace, Justice and Strong Institutions

Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

- **156,000** person-times of employees participated in legal publicity and
- The performance rate of business contracts reached **98.9%**
- **91.7%** of the proposals of the Workers' Congress were handled and settled
- Our coverage rate of collective bargaining and contracts was **27.4%**

17 Partnerships for the Goals

- The hiring rate of local employees reached **64.8%**
- We joined **3** international organizations related to social responsibilities and sustainable development
- We have established **166** overseas enterprises and institutions
- Nearly **55,000** person-times of employees participating in communication with external stakeholders
